

Examples of wiring between a drive and a brushless dc motor

The motor signal terminal is type D quick plug-in, and pin number is in the black rubber cover. If you cannot see the pin number, you can take off the rubber cover.

Motor Terminal

Controller Terminal

Red	Motor U	White plastic case	→	A pile
Yellow	Motor V	Green plastic case	→	B pile
Blue	Motor W	Blue plastic case	→	C pile

Signal Lines

Controller Line Color	Controller Line definition	Pin No.	→	Hall Line Color	Hall Line definition	Pin No.
Purple	5V	7	→	red	5V	1
Black	0V	14	→	black	0V	2
Yellow	Hall A	13	→	Yellow	Hall A	4
Green	Hall B	12	→	Blue	Hall B	5
Blue	Hall C	11	→	Green	Hall C	6

Wiring diagram:

1.The motor lines

2.The signal lines

3.After the wire connecting the motor to the controller is completed.

Power is connected to the controller's B+ (24V+,48V+,72V+...),B- pile(0V).

1. No. 1 (PWR) of the controller harness is connected to B+, connected with the on/off switch, and controlled start up.

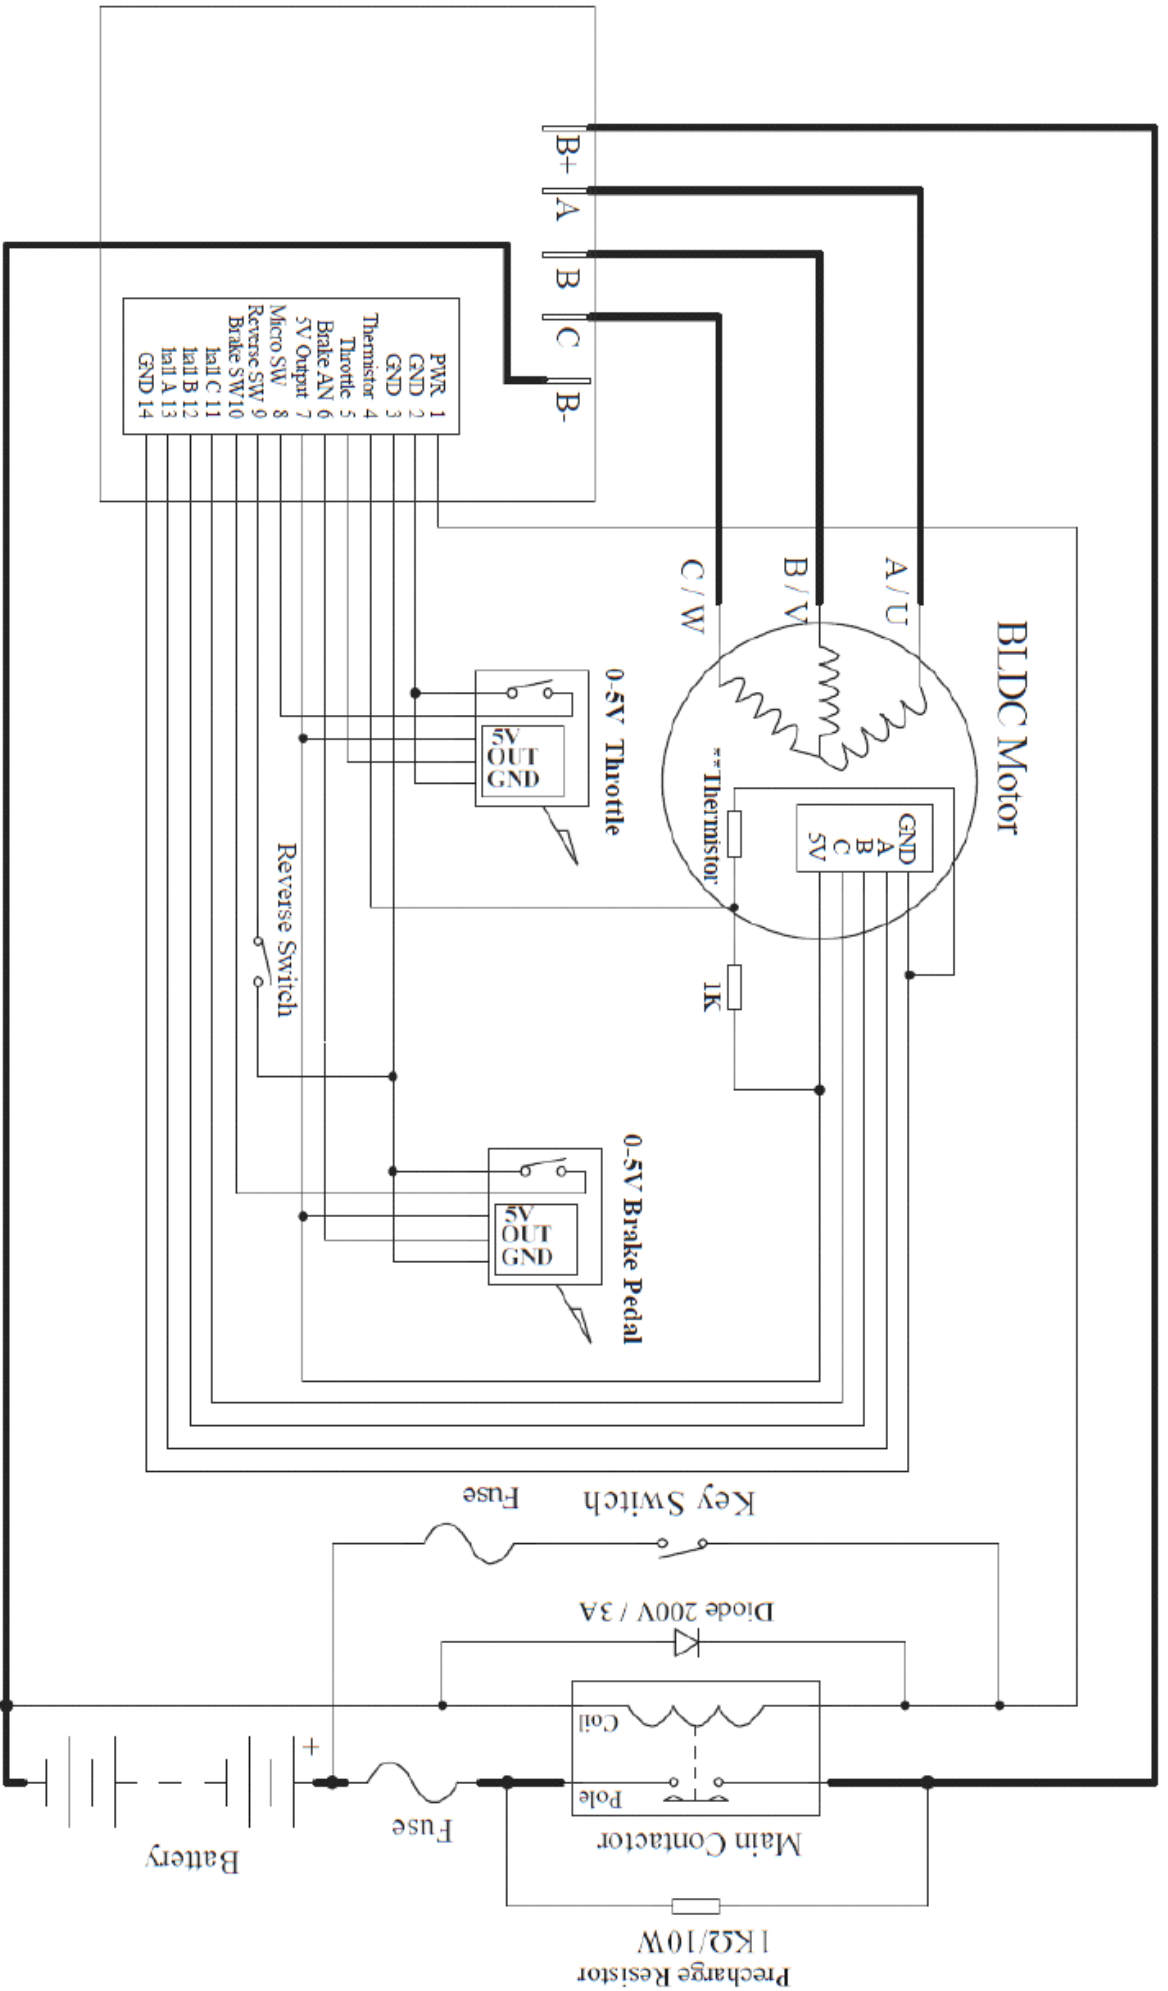

2. Wire harness 3 (RTN) 5(THROTTLE) 7(5V) connectors potentiometer

The no. 2 and no. 8 connectors are one operating direction of the motor, and the no. 2 and no. 9 connectors are reverse.

NOTE: Potentiometer can be used to output 0.5V.

Please securely wire B- before any other wiring. Never put contactor or break on B-

** Thermistor is optional item, default to KTY84-130.
